Education

Osaka University <i>PhD Computer Science, MEXT Scholarship</i>	2024 - present
Osaka University <i>Research Student, MEXT Scholarship</i>	2023 - 2024
Ateneo de Manila University <i>MS Computer Science, Director's List Scholarship</i>	2022 – 2023
Ateneo de Manila University <i>BS Computer Science, Magna Cum Laude, Director's List Scholarship</i>	2018 – 2022

Publications

Processing and acquisition traces in visual encoders: What does CLIP know about your camera? <i>Ryan Ramos*, Vladan Stojnić*, Giorgos Kordopatis-Zilos, Yuta Nakashima, Giorgos Toliás, and Noa Garcia</i>	ICCV 2025
Data leakage in visual datasets <i>Patrick Ramos*, Ryan Ramos*, and Noa Garcia</i>	ICCVW 2025
From Global to Local: Social Bias Transfer in CLIP <i>Ryan Ramos, Yusuke Hirota, Yuta Nakashima and Noa Garcia</i>	ICCVW 2025
Exploring Text-Guided Synthetic Distribution Shifts for Robust Image Classification <i>Ryan Ramos, Raphael Alampay, and Patricia Abu</i>	CORES 2023

*co-first authorship

Research Interests

Vision and vision-language model analysis My recent work has been on vision models robustness and sensitivity to distribution shifts, including both semantic (e.g. social bias) and non-semantic (e.g. processing and acquisition metadata) related shifts.

Dataset auditing My collaborators and I have been exploring data leakage between popular computer vision benchmarks and training datasets, as well as their implications. We are currently exploring future directions.

Work Experience

Research Intern

Jan 2022

Optical Media Interface Laboratory, Nara Institute of Science and Technology

- Conducted experiments on leveraging diffusion models for image dehazing

Research Intern

Jul 2021 – Aug 2021

Ateneo Laboratory for Intelligent Visual Environment, Ateneo de Manila University

- Conducted research on leveraging part-whole hierarchy based computer vision architectures for face mask usage in a COVID-19 context

Skills

Deep learning model analysis and data visualization Throughout my research I have focused on analyzing vision models using libraries such as Hugging Face, timm, and OpenCLIP. I visualize results using libraries such as polars, pandas, Matplotlib, and plotly.

Deep learning model training I have experience using libraries like Hugging Face, timm, and OpenCLIP to train CLIPs, LLaVAs, and language models in multi-GPU as well as multi-node settings.

Research paper writing I have multiple first-author papers, including main track submissions.
